

an instruction signal output unit ~~that produces~~ for producing the instruction signal based on the determined processing, and ~~outputs~~ for outputting the produced instruction signal to the connecting portion,

wherein the processor ~~performing the determined~~ determines the processing based on the instruction signal that is input through the terminal portion.

Claim 2 (currently amended): The remote-control toy according to claim 1, wherein the processing determining unit determines the processing with respect to the sound corresponding to the instruction contents, and the signal output unit outputs sound based on the instruction signal.

Claim 3 (currently amended): An extension unit that is provided in a remote-control toy, ~~that~~ which has a controller ~~that transmits~~ for transmitting a control signal containing an operating instruction according to an operation by a user, and a driving device ~~that is for being~~ controlled ~~to drive~~ based on the control signal, the extension unit ~~being capable of~~ for receiving the control signal,

the extension unit ~~including~~ comprising:

a unit main body; and

a signal processing device ~~that can be~~ detachably connected to an external portion of the unit main body,

the unit main body ~~including~~ comprising:

a signal receiver ~~that receives~~ for receiving the control signal;

a terminal portion ~~that outputs~~ for outputting the received control signal to the signal processing device; and

a processor ~~that performs processing based on~~ for processing an instruction signal that is output from the signal processing device,

the signal processing device ~~including~~ comprising:

a connecting portion that is connected to the terminal portion;

a processing determining unit ~~that discriminates~~ for discriminating the contents of the operating instruction contained in the control signal that is input through the connecting portion, and ~~determines~~ for determining a processing corresponding to the instruction contents; and

an instruction signal output unit ~~that produces~~ for producing the instruction signal based on the determined processing, and outputs the produced instruction signal to the connecting portion,

wherein the processor ~~performing the determined~~ determines the processing based on the instruction signal that is input through the terminal portion.
